

Linear Displacement Sensors LINEAR GAGE

LINEAR GAGE

Mitutoyo Precision Gage Heads

Full Lineup of Gage Heads from
Ultra-high Precision to
Excellent Cost-performance Types

Measurement principle

Transmission-type photoelectric linear encoders

The gage heads mainly use transmission-type photoelectric linear encoders, the principle of which is shown below. In this type, the light source (LED) and the detector element (photodiode) face each other with the main scale and index scale (20 μm pitch) positioned between them. As the scale moves with respect to the detector, the intensity of the light passing through the window in the index scale varies constantly. At this time, two synchronized sine-wave signals having a relative 90-degree phase difference are output.

These signals are then amplified and split electrically (with additional waveforms inserted) and output as 0.1 μm , 0.5 μm , 1 μm or 5 μm square-wave signals.

Traceability of Mitutoyo Standards

As of September 2018

Note: This is a simplified diagram of Mitutoyo's traceability system. Detailed traceability charts are published for each product.

■ About CAD data provided from website

If required, customers can download 2D/3D CAD data for Mitutoyo measurement equipment from the Mitutoyo website for the purpose of using in customers' design work.

- Mitutoyo website

www.mitutoyo.co.jp

Applications

Precision Parts Manufacturing

① Roll gap measurement

② PCB thickness measurement

③ Chip parallelism measurement

4 Seating check

6 FPD board multipoint measurement

5 Measurement of crimping height

7 Parallelism measurement of copying machine parts

Applications

Automobile Manufacturing Process

1 Cam-lift measurement

2 Brake disk multipoint measurement

5 Flatness measurement

6 Workpiece height detection

3 Machine device tool length measurement

4 Workpiece discrimination

7 Workpiece runout measurement

8 Inspection fixture

Measurement data loading software for EH, EV, VL
SENSORPAK

- Compact model offers the vibration/shock resistance of the proven **LGF** series.
Cross-sectional area is approx 1/5 compared to 542-181.
- Resolution of each model can be selected from 0.1 μm , 0.5 μm , or 1 μm .
- Excellent sliding durability improved to remain serviceable for at least 15 million cycles (in-house testing).
- Excellent shock resistance, 100 g/11 ms (IEC 60068-2-27)

SPECIFICATIONS

Order No.		542-158	542-157	542-156
Measuring range		10 mm (0.4 in)		
Resolution		0.1 μm	0.5 μm	1 μm
Measuring accuracy (20 °C)		(0.8+L/50) μm (L=mm)	(1.5+L/50) μm (L=mm)	
Quantizing error		±1 count		
Measuring force	Contact point downwards	0.8 N or less		
	Contact point horizontal	0.75 N or less		
	Contact point upwards	0.7 N or less		
Position detection method		Photoelectric linear encode		
Response speed		400 mm/s	1500 mm/s	
Output signal		90° phase difference, differential square wave (RS-422A equivalent), minimum edge intervals: 200 ns for 0.1 μm model, 200 ns for 0.5 μm model, 400 ns for 1 μm model		
Output signal pitch		0.4 μm	2 μm	4 μm
Mass		Approx. 175 g		
Dust/water resistance		Equivalent to IP66 (only gage head)		
Contact point		ø3 mm carbide-tipped (fixing screw: M2.5 (P=0.45) x 5), standard contact point 901312		
Stem		ø8 mm		
Bearing		Linear ball type		
Output cable length		2 m (directly from casing)		
Connector		Plug: RM12BPE-6PH (HIROSE), Compatible receptacle: RM12BRD-6S (HIROSE)		
Operating temperature (humidity) ranges		0 to 40 °C (RH 20 to 80 %, non-condensing)		
Storage temperature (humidity) ranges		-10 to 60 °C (RH 20 to 80 %, non-condensing)		
Standard Accessories		Wrench for contact point: 538610

- Cable length change
- Connector change

SERIES 542 — Slim Type

LGB

- Compact form (ø8 mm straight stem) is an optimal choice as a built-in type gage.
- The spindle guide uses high-precision linear ball bearings for extremely smooth movement and exceptional durability.
- Nut clamp type is also available (LGB2: refer to page 14).

Optional Accessories

- Rubber boot (spare): **02ADA004**
 - Extension cable
 - 5 m: **902434**
 - 10 m: **902433**
 - 20 m: **902432**
- Connectable up to 3 pieces, 20 m at maximum.

Custom order example

- Measuring force change
- Cable length change
- Connector change

- Absolute position detection makes it possible to maintain the reference point even when the power is switched off.
- Excellent protection against dust and splashing water (IP66) on the factory floor.
- Low-profile design allows narrow-space installation.
- The spindle guide uses high-precision linear ball bearings for extremely smooth movement and exceptional durability.
- Sliding durability improved to remain serviceable for at least 15 million cycles (in-house testing).
- Shock resistance, 100 g/11 ms (IEC 60068-2-27)

SERIES 542 — High-accuracy/resolution Type

LGH

- This series has achieved the outstanding accuracy of 0.2 μm combined with a resolution of 0.01/0.005 μm (according to model), practically equivalent to that of a laser interferometer, and a wide measuring range of 10 mm.
- A compact body design makes a significant contribution to a downsizing of this gage itself, which is best suited for calibration/evaluation of master gages as well as measurement of high-precision parts and as a length measuring sensor incorporated into high-precision positioning/control units.
- A low measuring force model is available for those applications where measurement of easily deformed or damaged workpieces is required.
- Every LGH series gage is bundled with a dedicated counter.

Gage head 542-715

Gage head 542-720

- This model is equipped with a newly developed photoelectric reflection-type linear encoder, achieving an excellent resolution of 0.01 μm , a measuring accuracy of 0.2 μm and a measuring range of 10 mm at a low price.
 - The response speed has improved 2.8 times that of conventional products, achieving compatibility between high accuracy and high speed.

- This model is equipped with a newly developed ultra-high precision transmission type linear encoder, achieving the outstanding resolution of 0.005 μm (5 nm).
 - A measuring accuracy of 0.1 μm has been attained over the wide measuring range of 10 mm. This series is most suited for calibration/evaluation of master gages where its wide measuring range is a great advantage.

*1: Applies when used with counter (excluding quantizing error).

*2: The storage temperature/humidity ranges after unpacking are the same as the operating temperature/humidity ranges.

*3: Digimatic output shall be up to 6 digits of data. For data of 7 digits or more, all digits will not be output to the display.

Gage Head Mounting Fixtures

■ Plain Stem and Stem with Clamp Nut

The stem used to mount a linear gage head is classified as a "plain type" or "clamp nut type" as illustrated below. The clamp nut stem allows fast and secure clamping of the linear gage head. The plain stem has the advantage of wider application and slight positional adjustment in the axial direction on final installation, although it does require a split-fixture clamping arrangement or adhesive fixing. However, take care so as not to exert excessive force on the stem.

Split-clamp mounting fixtures

- To mount a gage head with an 8 mm diameter stem, use a 9.5 mm diameter stem bushing.

Head Specifications (Accessories)

Gage Head Mounting Fixtures

- Mounting with a thrust stem

A thrust stem is available as an option for the **LGF**, **LGK**, and **LGD** gage heads. Installing a thrust stem on the stem allows direct mounting, simply by drilling a hole in a section of suitable thickness on the fixture.

For 10 mm **LGD/LGF/LGK**

Components Thrust stem: **02ADB681**
Clamp nut: **02ADB682**
Wrench: **02ADB683**

Unit: mm

* A mounting section with a thickness of 6 through 10.5 mm is suitable.

With the use of a thrust stem and clamp nut, a gage fixture can be arranged simply by drilling a 9.5 mm dia. hole. A gage can be secured firmly with ease with this arrangement.

■ **IMPORTANT**

In attaching a thrust stem, be sure to fix the stem first with a dedicated wrench (02ADB683). An excessive force applied between the gage main body and stem may cause damage to the gage.

■ **NOTE**

Both the dedicated wrench (02ADB683) and M9.5 x 0.5 threaded section are for mounting a thrust stem. Do not use them for any purpose other than mounting a thrust stem.

For 25 mm **LGD/LGF** Components Thrust stem: **02ADN371**
 Clamp nut: **02ADB692**
 Wrench: **02ADB693**

Unit: mm

* A mounting section with a thickness of 10 through 12 mm is suitable.

With the use of a thrust stem and clamp nut, a gage fixture can be arranged simply by drilling an 18 mm dia. hole. A gage can be secured firmly with ease with this arrangement.

■ **IMPORTANT**

In attaching a thrust stem, be sure to fix the stem first with a dedicated wrench (02ADB693). An excessive force applied between the gage main body and stem may cause damage to a gage.

■ **NOTE**

Both the dedicated wrench (02ADB693) and M18 x 1 threaded section are for mounting a thrust stem. Do not use them for any purpose other than mounting a thrust stem.

For 50 mm **LGD/LGF**

Components Thrust stem: **02ADN371**
 Clamp nut: **02ADB692**
 Wrench: **02ADB693**

Unit: mm

Technical drawing showing the assembly of the 50 mm LGD/LGF gage. The main view is a side elevation showing the gage body with a mounting section at the top. Dimensions include a total height of 124.9 mm, a mounting section height of 4.5 mm, and a hole diameter of 18 mm. A thrust stem (02ADN371) is inserted into the hole, secured by a clamp nut (02ADB692). The thrust stem has a diameter of 18 mm with a tolerance of +0/-0.018 mm. The clamp nut has a thread of M18 x 1. A cross-sectional view at the bottom shows the internal thread of the mounting section with a diameter of 24.2 mm.

Extension signal cable

The distance between a gage head* and display unit can be extended up to 20 m by using these cables (max. 3 cables).

* Not available for LGF with Origin Point Mark, LGS, LGD models, and Laser Hologage.

SPECIFICATIONS

Order No.	Cable length
902434	5 m
902433	10 m
902432	20 m

Digimatic cable extension adapter: 02ADF640

This adapter can be used when the LGS or LGD gage head is to be connected to a display unit where the provided cable length is not sufficient for this connection.

02ADF640 Mass: 15 g

Note:

- Available for LGS-1012P and LGD.
- Available for EC101D, EG101D, EB-11D, EH-102D and EV-16D.
- Do not join more than one piece of this product together for use.

Attachment holder for lifting lever

This holder is attached between the spindle and the contact point for fixing the lifting lever.

SPECIFICATIONS

Order No.	
02ADG181	Attachment holder
137693	Lifting lever

Extension signal cable for gage head with Origin Point Mark

A signal cable from the head to the receiver circuitry can be extended.

Maximum number of connectable cables is limited to 3, and the maximum total extension length is limited to 20 m.

SPECIFICATIONS

Order No.	Cable length
02ADF260	5 m
02ADF280	10 m

Optional Accessories

Measuring stand

**Granite comparator stand
BSG-30HX 215-156-10**

Base material	Granite
Base size (mm)	W 250 x D 300 x H 95
Base flatness	3.5 μ m
Fine adjustment	Square thread
Stem size (mm)	ϕ 20, ϕ 9.53, ϕ 8 with bush

LGF, LGD 25 mm/50 mm. When using the stand at 25 mm/50 mm stroke, separately obtain a ϕ 15 bushing.

**Comparator stand
BSC-30HX 215-505-10**

Base material	Hardened steel, Grooved measuring stage
Base size (mm)	W 179 x D 255 x H 89 (Measuring stage $\square$ 150 x H25)
Base flatness	2.3 μ m
Fine adjustment	Square thread
Stem size (mm)	ϕ 20, ϕ 9.53, ϕ 8 with bush

LGF, LGD 25 mm/50 mm. When using the stand at 25 mm/50 mm stroke, separately obtain a ϕ 15 bushing.

Mounting holder A, B

Useful when the Laser Hologage is mounted on an alternate fixture rather than the regular measuring stand.

Holder A **971751** Mass: 250 g

Holder B **971752** Mass: 180 g

Measuring stand for Laser Hologage

971750

This **LGH** stand greatly helps the gage to achieve high accuracy.

Mass: 23 kg

Release with damper

Spindle-lift release for the Laser Hologage. A sudden drop of the spindle is prevented by the return-speed adjustment knob.

971753 Mass: 50 g

Differential square-wave

Model (Resolution)	LGB (0.1 μm)	LGK/LGF (0.1 μm)	LGK/LGF (0.5 μm)	LG/LGB/LGF (1 μm)	LGF (5 μm)	LGF with reference point mark (0.5 μm)	LGF with reference point mark (1 μm)
Power supply	+5 V (120 mA), power supply ripple voltage 200 mV p-p max.						
Output signal	90° phase difference, differential square wave (RS-422A equivalent)						
Signal pitch	0.4 μm		2 μm	4 μm	20 μm	2 μm	4 μm
Minimum edge interval	250 nsec	200 nsec	250 nsec	500 nsec	1000 nsec	250 nsec	500 nsec
Output signal level	+5 V (4.8 to 5.2 V, 80 mA) ϕA , $\phi\bar{A}$, ϕB , $\phi\bar{B}$: TTL output, line driver output, AM26LS31 or equivalent					+5 V (4.8 to 5.2 V, 120 mA) ϕA , $\phi\bar{A}$, ϕB , $\phi\bar{B}$, ϕZ : TTL, line driver, AM26LS31 or equivalent	
Plug type	RM12BPE-6PH (HIROSE)					PRC05-P8M (TAJIMI)	
Compatible socket	RM12BRD-6S (HIROSE)					PRC05-P8M (TAJIMI)	
Recommended receiver	Differential input, line receiver, AM26LS32						
Gage connecting cable length	2 m; directly connected to the gage						
Extension cable length	Max. 20 m (extension cables of 5, 10 and 20 m in length are available)						
Error output*	See the "Timing chart (occurrence of error)" below						

* With an LGF gage, a seventh signal line may be provided to output the error alarm. (Factory option).

Output pin assignment

1) Output plug RM12BPE-6PH (HIROSE)

2) Pin assignment

Pin No.	Assignment
1	+5 V
2	ϕA
3	ϕB
4	$\phi\bar{A}$
5	GND
6	$\phi\bar{B}$

Note: Power supply (120 mA) to a sensor (gage head)
Power supply ripple voltage: 200 mV p-p or less

1) Output plug PRC05-P8M (TAJIMI)

2) Pin assignment

Pin No.	Assignment
A	+5 V
B	GND
C	ϕA
D	$\phi\bar{A}$
E	ϕB
F	$\phi\bar{B}$
G	$\phi\bar{Z}$
H	N.C.

Note: Power supply (120 mA) to a sensor (gage head)
Power supply ripple voltage: 200 mV p-p or less

Timing chart (normal)

1) Real-time pulse output (Phase-A wave advances when the spindle is retracted.)

- Output condition: Spindle speed $\leq 250 \text{ mm/s}^2$
- Minimum edge-to-edge interval = Tr
- Output delay time*1: Max. 1 μs

LGF origin point mark applied Timing chart (normal)

ϕZ with origin point signals is only output.

■ Minimum edge-to-edge interval/pulse width under each condition

Model	Resolution	Tr (real-time output)	Te (error output)
LGB	5 μm 1 μm	0.4 μs	0.4 μs
LGF			
LGK			
LG	0.5 μm	0.2 μs	0.2 μs
LGF			
LGK			
LGB	0.1 μm	0.2 μs	0.4 μs
LGF			
LGK			
LG			

Timing chart (occurrence of error)

- Output condition: Gage heads will identify an error under the following conditions and produce an output as described above.
 - Gage response speed*3 < Spindle speed
 - At a disturbance such as interference, vibration, etc.
- Minimum width of output pulses = Te

- * 1: Output delay time: Time until the counting pulse catches up to the spindle position.
 * 2: The actual limit of real-time pulse output will be depreciated to this value. This is because actual detection signals unavoidably contain acceleration components in association with the spindle motion as well as error components from a little noise included in the signal itself. As a result, some burst pulses at a speed below the ideal conditions (i.e. ideal signal form at constant speed) may be generated.
 * 3: Gage respond speed: Refer to the specifications section in the User's Manual.

[IMPORTANT]

- Since any output during an error condition cannot be used as the attribute data, it is necessary to detect the error condition at the reception circuitry side.
- It is recommended to design user circuitry based on an IC chip that is capable of counting at 5 Mcps (equivalent to square wave of 1.25 MHz) or greater.

Digimatic code

1. Pin assignments and signals

- Compatible socket:
Sumitomo 3M: V Low-Proheader
Model: 7610-5002XX or equivalent

Pin No.	Signal	I/O	Description
1	ND	—	Signal ground
2	DATA	Output	Measurement data-output terminal
3	CK	Output	Synchronized clock-output terminal
4*1	N.C.	—	Not used
5	REQ	Input	Input for data transmission request from external device
6*1	ORIG	Input	Input for absolute-origin setting signal
7*1	N.C.	—	Not used
8*1	N.C.	—	Not used
9*1	+5V	—	Power supply (+5V±10 %)*2
10*1	GND (F.G.)	—	Frame ground

*1: LGD, LGS uses a unique specification.

All others use the common Digimatic output specification (10-pin, square).

*2: Current consumption of LGD, LGS: Idd=20 mA max.

2. I/O electrical specifications

- Output terminal format: CK, DATA
N-channel open drain
Maximum output current:
400 µA max. (when Vol=0.4 V)
Output withstand voltage: -0.3 V to 7 V
- Input terminal format: REQ, ORIG
Pull-up CMOS input
Internal power supply voltage: Vdd= 1.35 to 1.65 V
Pull-up resistance: R1=10 to 100 KΩ
"H" level input voltage: VIH=1.1 V min.
"L" level input voltage: VIL=0.3 V max.

Note: Since the power supply voltages are different between the gage side and the external device side, be sure to use an open collector or open drain circuit. Do not use CMOS output or similar.

3. Data format

Unit (mm: 0, inch: 1)

- Data is output as 13-digit (52-bit) based on 4 bits=1 digit.
- Data is output in order from d1 to d13. Each digit is output in the order of LSB to MSB.

4. Timing chart

Standard (for reference)

Symbol	min.	max.
t1	0	2sec
t2	15 µs	—
t3	100 µs	—
t4	100 µs	—
t5	0	—
t6	—	—
t7	—	—
t8	—	—

LGD

Symbol	min.	max.
t1*	30 µs	95 ms
t2	15 µs	—
t3	100 µs	—
t4	100 µs	—
t5	0 µs	—
t6*	—	100 µs
t7*	100 µs	—
t8*	—	30 ms

Symbol	min.	max.
t10*	1.5 s	—
t11*	—	4 s

LGS

Symbol	min.	max.
t1*	160 µs	85 ms
t2	150 µs	180 µs
t3	150 µs	180 µs
t4	300 µs	330 µs
t5	0 µs	—
t6*	—	100 µs
t7*	100 µs	—
t8*	—	—

Note 1: The specifications indicated by an asterisk (*) are applicable only to LGD, LGS. All other Digimatic output specifications are common to all models.

Note 2: Read data only when CK is at the "L" level.

Note 3: Do not input REQ signal (fixed at "H") while the absolute origin is being set (during t11).

Note 4: If t5, t6 and t7 are satisfied and REQ is continuously input, an output is obtained from LGD, LGS at intervals of approximately 95 ms.

Note 5: Start inputting ORIG and REQ after two or three seconds have elapsed (the estimated time required for internal circuit/sensor to stabilize) following power-on.

Q

Question

What is the absolute position origin point?

A

Answer

The absolute position origin point is known as the origin point (0 point) that will never vanish even when power is turned off. The LGS and LGD series are equipped with the absolute scale (electrostatic capacitance type ABS scale) that can set the absolute position origin point, thus always outputting the contact point position in reference to the last origin point when power is turned on again. This removes the necessity for adjustment with the master every time power is turned on and contributes significantly to automation of measurement.

Absolute Scale Device (Electrostatic capacitance type ABS scale device)

Patent registered (Japan, USA, UK, Switzerland, Germany, Sweden)

- An absolute address is applied to individual absolute scales inside the main scale just like rail ties are numbered. A measured value is displayed by reading this absolute address from a slider position.

- The system uses 3 scales with a different wavelength while applying an absolute address on each scale.

RS Link function

It is possible to connect a maximum of 10 counter units together to carry a maximum of 60 channels of multi-point measurement at a time.
For this connection use the dedicated RS link connection; **02ADD950** (0.5 m), **936937** (1 m) or **965014** (2 m) (The sum of length of RS link connection cable permitted for the entire system is 10 m or less.)

SENSORPAK

Measurement data loading software for EH, EV, VL

MeasurLink[®] ENABLED

Data Management Software by Mitutoyo

- This software transfers measurement data to a personal computer from linear gage counters (**EH**, **EV**) with RS-232C output, linear gage counters (**EH**) with USB output, or the Litematic display (**VL**).
- Maximum 60 channels of measuring points can be processed.
- Arithmetical calculation and maximum width calculation using the measurement data.
- Export of measurement data into MS-Excel.
- Various graphic functions (numeric value display, meter display, bar-graph display, overall judgment display)

EC Counter – Panel mount, Single function Type

Features

- Employs the DIN size (96 x 48 mm) and mount-on-panel configuration, which greatly facilitates incorporation into a system.
- Can either produce tolerance judgment output or Digimatic output.

Functions

- Preset
- Tolerance judgment (3 steps)

Control input	External PRESET, external HOLD
Power supply	Voltage: Supplied AC adapter, or 9 to 12V DC Consumption: 4.8 W (max. 400 mA) Ensure at least 1 A is available per unit.
Operation/storage temperature range	Operation: 0 to 40 °C/Storage: -10 to 50 °C
External dimensions	96 (W) x 48 (H) x 84.6 (D) mm
AC adapter	AC adapter: (Japan/North America) 06AEG302JA /(EU) 06AEG302D /(UK) 06AEG302E /(Korea) 06AEG302K /(China) 06AEG302DC
Applicable head	LGD, LGS, ID
Mass	220 g
Optional accessories	Connecting cable for digimatic mini-processor 936937 (1 m), 965014 (2 m) DC plug PJ-2 214938 I/O cable (2 m): C162-155

* To denote your AC power cable add the following suffixes to the order No.: A for UL/CSA, D for CEE, DC for CCC, E for BS, K for KC, C and No suffix are required for PSE.

DIMENSIONS

Input/output specifications

- 1) Compatible plug: MIL type connector FAS-10-17 (YAMAICHI), XG4M-1030-T (OMRON)
- 2) Pin assignment

Pin No.	I/O	Description	Function	Optional I/O cable color
1		COM	Connected to the internal GND	Amber/black
2	O	+NG	Tolerance output: The relevant output terminal falls to L.	Amber/red
3	O	GO		Yellow/black
4	O	-NG	At an error display [+NG=-NG=L]	Yellow/red
5	I	HOLD	HOLD input	Bright green/black
6	I	P.SET	PRESET input (to cancel the error)	Bright green/red
10		F.G	Shield	White/red
Other than the above listed shall be unconnected.				

Note 1: Output from each pin in the Digimatic output mode may differ from those which are described in the table above.

Note 2: One end of the I/O cable (2 m, optional) consists of separate wires for connection as appropriate. The cable's F.G wire (with solderless terminal, green) should be connected to the grounding terminal of the main unit.

3) I/O circuit

1. Output circuit (-NG, GO, +NG)

Transistor is "ON" when the open-collector is "L".

2. Input circuit (PSET, HOLD)

Input is valid when the line is "L".

4) Timing chart

1. Tolerance judgment output

* Varies depending on the gage.

2. External preset/HOLD

* Input is active when L1="H", 0="L".

5) Optional I/O cable (2 m) C162-155

Digimatic Mini-processor
DP-1VA LOGGER
264-505

Counter Specifications

EG Counter – Panel mount, Single function Type

Features

- Possible to produce 3-step/5-step x 3 kinds of tolerance output and BCD output.
- Smoothing function can reduce fluctuation of display digits.
- Employs the DIN size (96 x 48 mm) and mount-on-panel configuration, which greatly facilitates incorporation into a system.

Functions

- Preset
- Direction switch
- Tolerance judgment (3/5-step, 3 kinds)
- Peak (max., min., runout) measurement
- Constant number
- Smoothing
- Error display/output
- Key protection

MIN	1	0
TIR	1	1

5. HOLD timing

6. Interval mode

The data will be continuously output according to the internal timing of the counter.

*1: Depends on the setting of parameter No. 23.

7. Command mode

The data will be output with both the HOLD and READY lines being synchronized.

8. INH input

BCD data output is OFF during the input of INH.

5) Timing chart

1. Tolerance output

* Depends on the gage head (the values show those for LGD).

2. External preset/HOLD

* Input is active when L1="H", 0="L"

EB Counter – Panel mount, Multi- function Type

Features

- Possible to produce 3-step/5-step x 7 kinds of tolerance output and limit value output independently for each of 7 channels.
- Provided with serial BCD output capability, which makes the connection to a programmable controller or personal computer, etc., possible with the minimum cabling requirement.*¹
- Possible to perform dynamic measurement with the simplified analog output.*²
- Employs the DIN size (96 x 48mm) and mount-on-panel configuration, which greatly facilitates incorporation into a system.

*1: Patent registered (Japan)

*2: Patent registered (Japan, USA, UK), Patent pending (Germany)

Functions

- Preset
- Tolerance judgment output (3/5-step, 7 kinds)
- Limit value output (2 kinds independently for each of the 7 channels)
- Peak (max., min., runout) measurement
- Choice of data output (Serial BCD, Simplified analog, Digimatic)
- Error display/output
- Key protection

System Configuration

The system connects Mitutoyo's linear gages while displaying and outputting measurement data with counters. Note that the input/output signals differ depending on the external equipment.

DIMENSIONS

Powerful tolerance judgment function

Keeps up to seven 3-step/5-step tolerance limits in memory.

It is possible to switch these tolerance limits with an appropriate button operation or external signal.

● Stop position adjustment

Adjust the stop position depending on the workpiece type. For this control use the tolerance judgment signals.

● Indicator display/output where 3 steps of tolerance limit are set

Condition	GO/NG indicator	LIMIT indicator and I/O output
Measured value < S1	Amber ON	L1
S1 ≤ measured value ≤ S4	Green ON	L3
S4 ≤ measured value	Red ON	L5

● Indicator display/output where 5 steps of tolerance limit are set

Condition	GO/NG indicator	LIMIT indicator and I/O output
Measured value < S1	Amber ON	L1
S1 ≤ measured value ≤ S2	Amber flash	L2
S2 ≤ measured value ≤ S3	Green ON	L3
S3 ≤ measured value ≤ S4	Red flash	L4
S4 ≤ measured value	Red ON	L5

Possible to selectively keep two of the limit values for 7 channels.

It is possible to switch these tolerance limits with an appropriate button operation or external signal.

● Sorting workpieces by value

It is possible to sort workpieces according to user-defined value ranges.

SPECIFICATIONS

Order No.	542-092-2		542-094-2		542-093-2	
Model No.	EB-11P		EB-11Z		EB-11D	
Quantizing error						±1 count
Maximum input frequency	1.25 MHz (2-phase square wave), response speed depends on gage specification.				Response speed depends on gage specification.	
Display	Resolution [mm] Values in parentheses show the maximum display range.	0.01 (±9999.99)/0.005 (±999.995)/0.001 (±999.999)/ 0.0005 (±99.9995)/0.0001 (±99.9999) (Parameter setting formula)			0.01 (±9999.99)/ 0.001 (±999.999)	
	Tolerance judgment display	LED display (3 steps: Amber, Green, Red/5 steps: Amber, Amber flashing, Green, Red flashing, Red)				
Input/output	Tolerance judgment output	L1 to L5, open-collector				
	Control output	Normal operation signal (NOM), open-collector				
	Control input	Presetting, display hold, peak value clear, tolerance judgment BANK switch, open-collector or no-voltage contact signal (with/without contact point)				
Interface	Serial BCD	Bit serial format, open-collector				
	Analog output	2.5 V + Counting value x Voltage resolution (25 mV/2.5 mV): Full-scale 0 to 5 V				
	Digimatic input/output	■ Connecting to the external switch box (02ADF180) makes it easy to enter tolerance limits and preset values. Note: This function is not available when the gage is connected to DP-1VA, Digimatic Mini-Processor. ■ It can only be connected to DP-1VA Digimatic Mini-Processor (264-505). ■ Number of tolerance steps can be expanded by assembling EB-D counters.				
Power supply	Voltage	12 - 24 V DC				
	Consumption	6 W or less (50 mA max.) Ensure at least 1 A is available per unit.				
Operating temperature range	0 to 40 °C (RH 20 to 80 %, non-condensing)/-10 to 50 °C (RH 20 to 80 %, non-condensing)					
External dimensions	96 (W) x 48 (H) x 156 (D) mm					
Applicable gage head	LG, LGB, LGF, LGK (LGF Models with reference point mark, sine wave output type are excluded.)		LGF with reference point mark		LGD, LGS-1012P, ID	
Optional Accessories	02ADB440 I/O output connector (with cover) 357651 AC adapter 02ZAA000 AC cable* 02ADD930 Terminal connecting cable*					
Mass	Approx. 400 g		Approx. 400 g		Approx. 400 g	

* Required when using an AC adapter.

3) Timing chart

1. Power ON characteristics

* () represents EB-D.

2. Tolerance judgment result output period

3. External preset/Peak clear

4. Peak mode/BANK specification

Peak mode setting

	SET 3	SET 2	SET 1
Current value	H	H	H
MAX	H	H	L
MIN	H	L	H
TIR	H	L	L

BANK setting

	SET 3	SET 2	SET 1
BANK 0	H	H	H
BANK 1	H	H	L
BANK 2	H	L	H
BANK 3	H	L	L
BANK 4	L	H	H
BANK 5	L	H	L
BANK 6	L	L	H
BANK 7	L	L	L

5. HOLD timing

*1: With the serial BCD unit in the command mode (PNo.35=0)

*2: (Only for EB-11Z) Resetting of origin point (PNo.42=1)

External switch box (optional)

Makes it easy to enter tolerance settings and preset values.

02ADF180 (with a 2 m cable)

EH Counter - Panel mount, Multi-function Type with RS-232C Communication Functions

EH-101P (542-075) For differential square-wave output gage head (single axis)  	EH-102P (542-071) For differential square-wave output gage heads (2 axes)  	EH-102Z (542-073) For differential square-wave output gage heads with Origin Point Mark (2 axes)  	EH-102D (542-072) For Digimatic code output gage heads (2 axes)  
--	--	--	--

Features

- 1-axis display type, and 2-axis independent display type or 2-axis type that can display sum/difference calculation results are available.
- Multi-functional counter with functions of zero-set, preset, and tolerance judgment
- Equipped with an RS-232C interface as standard. This allows data transfer to a personal computer, etc.
- A multi-point measuring system can easily be built up with the built-in networking function (RS link). (Max. 10 points)
- Employs the DIN size (144 x 72 mm) and mount-on-panel configuration, which greatly facilitates incorporation into a system.

Functions

Zero-set

Sets the displayed value to 0 at any position of the spindle.

Direction switch

Selects the counting direction of (+) or (-), whichever is convenient with a given direction of spindle movement.

Tolerance judgment indication/output

Sets two (or four) desired tolerances for three (or five) stages. Judgment results can be output to an external device.

External control

Zero set, preset and display hold can be controlled from the I/O terminals.

Preset

Presets the display at any value. Counting begins at the preset value.

Minimum reading digit change

To improve visualization of measurement data, the least significant digit can be extinguished. (However, the display via RS-232C and printing to a printer are performed down to the least significant digit.)

Sum/difference calculation

Enables measurement of thickness or step height using two gages.

Error message display

The counter displays an error message when a gage-head over-speed or breakage situation occurs. It outputs the error signal from the I/O terminal.

Peak hold/TIR measurement

Allows switching to the measurement mode for maximum value, minimum value, and run out value (maximum - minimum), in addition to the normal measurement mode.

Counting standby (to prevent malfunction at start-up)

This prevents malfunction due to power interruption, etc.

Communication via RS-232C interface

RS-232C allows communication with a personal computer. It allows not only the reading of measured values but also data transmission to the counter and remote operations, such as when changing various settings.

Digimatic output

Digimatic-Mini processor DP-1VA. (RS-232C function is not available when the gage is connected to DP-1VA).

SPECIFICATIONS

1-axis input type and 2-axis input type counters are available.

Order No.	542-075*	542-071*	542-073*	542-072*

* To denote your AC power cable add the following suffixes to the order No.: A for UL/CSA, D for CEE, DC for CCC, E for BS, K for KC, C and No suffix are required for PSE.
For those models of the Order No. with Suffix "1", an AC adapter is not supplied as a standard accessory.

DIMENSIONS

BCD Output

■ Simultaneously outputs at channels [A] and [B] in groups of 4 bits.

1) Timing chart

2) Data format

LSD (Least significant digit)				MSD (Most significant digit)			
D1	D2	D3	D4	D5	D6	D7	D8
A/B_bit0	1 x 10 ⁰	1 x 10 ⁰		1 x 10 ⁷			
A/B_bit1	2 x 10 ⁰	2 x 10 ⁰		2 x 10 ⁷			
A/B_bit2	4 x 10 ⁰	4 x 10 ⁰		4 x 10 ⁷			
A/B_bit3	8 x 10 ⁰	8 x 10 ⁰		8 x 10 ⁷			
A/B_SIGN	SIGN	BANK	PEAK1 PEAK2				
	+: H -: L						
			PEAK1 PEAK2				
			NOM L L				
			MAX H L				
			MIN L H				
			TIR H H				

Data output example

Bits 0-3	D1	D2	D3	D4	D5	D6	D7	D8
SIGN	1	0	6	5	4	3	2	1

- 1 2 3 4 5 6 0 1

* Negative logic output is possible for SIGN, BANK, PEAK, DATA (PNo.21=1).

Simple analog output

■ Monitoring of output waveforms is possible with an analog recorder connected.

1) Output specification

Output voltage = 2.5 V + [counter value] x [voltage resolution] (0.75 mV)
 Range: 1.0-4.0 V
 Response speed: 10 Hz (updating at 5 ms)
 Accuracy: ±1 % (0.5-4.5 V)
 Accuracy is rated at 4 V level
 Load resistance: 300 KΩ or more

2) Measuring range

Parameter	Measuring range (mm)/Resolution (mm)		
No.30	10 μm gage	1 μm gage	0.1 μm gage
0	±19.99 (0.01)	±1.999 (0.001)	±0.1999 (0.0001)
1	±199.90 (0.1)	±19.990 (0.01)	±1.9990 (0.001)
2	±1999.00 (1)	±199.900 (0.1)	±19.9900 (0.01)

RS Link* Function

It is possible to connect a maximum of 10 counter units together to carry a maximum of 20 channels of multi-point measurement at a time.

For this connection use a dedicated RS link cable; **02ADD950** (0.5 m), **936937** (1 m) or **965014** (2 m) (The maximum total length of RS link cables permitted for the entire system is 10 m.)

* Patent registered (Japan, U.S.), Patent pending (E.U.)

RS-232C Communication Functions

Makes it possible not only to log measured values but also make various remote settings including the zero-setting of a counter, etc. To communicate data with a PC, terminal software is needed that should be provided by the customer.

Command format	Corresponding output	Function
GA**CRLF	G#**, +01234.567CRLF	Outputs the [Displayed value] through RS-232C
CN**CRLF	CH**CRLF	Switches the display to the [Current value]
CX**CRLF	CH**CRLF	Switches the display to the [Maximum value]
CM**CRLF	CH**CRLF	Switches the display to the [Minimum value]
CW**CRLF	CH**CRLF	Switches the display to the [TIR (runout)]
CR**CRLF	CH**CRLF	Zeroreset
CL**CRLF	CH**CRLF	Clears the peak value
CP**, +01234567CRLF	CH**CRLF	Inputs the preset value
CD**, +01234567CRLF	CH**CRLF	Inputs tolerance value S1
CE**, +01234567CRLF	CH**CRLF	Inputs tolerance value S2
CF**, +01234567CRLF	CH**CRLF	Inputs tolerance value S3
CG**, +01234567CRLF	CH**CRLF	Inputs tolerance value S4
CS**CRLF	CH**CRLF	Cancel the error
CK**CRLF	CH**, \$CRLF (\$=0 or 1)	Checks the HOLD status

** denotes a gage channel number between 01 and 99 (*00 means all channels).

denotes the type of data [N: Current value, X: Maximum value, M: Minimum value, W: TIR (runout)].

CRLF: CR (carriage return), LF (line feed).

Note 1: For presetting and tolerance limit setting, enter each value consisting of a sign and 8 digits of numeric value without a decimal point.

Note 2: Perform the tolerance limit setting in the order of CD and CG for the case of 3-step tolerance judgment, and in the order of CD, CE, CF, and CG for the case of 5-step tolerance judgment.

Note 3: The RS communication function will be suspended during key operation (e.g. setting parameters, preset values, or tolerance limits). It automatically resumes the command and data output operation when the gage is recovered to such a condition that the counting is possible.

Note 4: For canceling the counting-standby state, use CS00CRLF (specification of all channels).

RS-232C specifications

1) Compatible plug: D-sub9 pin (female), inch thread specification

2) Pin assignment

Receptacle
D-sub9 pin (male)
inch thread specification

Pin No.	Description	I/O	Function
2	RXD	IN	Receive data
3	TXD	OUT	Send data
4	DTR	OUT	Data terminal ready
5	GND	—	Ground
6	DSR	IN	Data set ready
7	RTS	OUT	Request to send
8	CTS	IN	Clear to send
1, 9	N.C.	—	Connection impossible

3) Communication specifications (conforming to EIA RS-232C)

Home position	DTE (Data Terminal Equipment) Use a cross-type cable.
Communication method	Half-duplex, teletype protocol
Data transfer rate	4800, 9600, 19200 bps
Bit configuration	Start bit: 1 Data bits: (7, 8) ASCII, upper-case characters Number of parity bits: None, even, odd Number of stop bits: 2
Setting the communication conditions	Set via parameters.

36	I	PB	[B] Lower row preset/Peak clear (in the peak HOLD mode) [2-axis model]		

*1: During input the decimal point will be flashing.

*2: During input the UNIT indicator will be flashing.

3) I/O circuit

1. Output circuit:

NOM, AL1 to AL5, BL1 to BL5 Transistor is "ON" to drive the line to "L" (open-collector output).

Supply voltage: Max. 24 V
Output current: Max. 10 mA
Output saturation voltage: Max. 0.7 V

2. Input circuit:

PA, PB (only with 542-062), HOLD Input is valid when the line is "L".

4) Timing chart

1. Power ON characteristics

Note: With the RS link established the reference counter will be the one that was powered on last.

3. External preset (PA, PB) input

Note: Excluding the period during key input, RS-232C communication or Digimatic processing.

5. RS-232C command input and response output

Note: Excluding the period during key input, RS-232C communication or Digimatic processing.

2. Tolerance judgment result output period

4. Peak clear input

(After inputting HOLD, or simultaneous input with the preset value)

*1: () represents the case either in peak mode or in such a mode that an input of HOLD triggers RS-232C output.

*2: Case in such a the mode that input of HOLD triggers RS-232C output.

Note: The PRESET indicator will be flashing during the input operation of HOLD.

D-EV Display Unit

Display unit for the EV counter

- This single unit enables external display and setting operation of one EV counter.
- Required when a linear gage with a resolution of 0.1 μm is used.
- Using this display allows various settings for the EV counter to be made without the need for a personal computer or other equipment. Reduction in adjustment time is achieved.
- Able to display each axis measurement value and GO/NG judgment result, total GO/NG judgment result for all axes, setting details, and errors.
- Allows error message display upon occurrence of an error: Enables an early settlement of the problem.

SPECIFICATIONS

Item	Description
Number of digits	Sign plus 6 digits (8 digits internal to EV counter)
LED display	Channel display (also for judgment result display): 3 (3-color LED) Measurement mode display (current data, maximum value, minimum value, runout): 2 Status display: 1 (2 colors)
Operation switches	4
Function of operation switch	Channel switching, measurement mode switching (current data, maximum value, minimum value, runout), parameter setting, presetting, tolerance setting
Input/output	RS Link connectors: 1 each for IN, OUT
Error message	Overspeed, gage error etc.
Power supply	Terminal block (M3 screw), 12 - 24 V DC, 200 mA
Operating temperature (humidity) ranges	0 to 40 °C (RH 20 to 80 %, non-condensing)
Storage temperature (humidity) ranges	-10 to 50 °C (RH 20 to 80 %, non-condensing)
External dimensions	96 (W) x 48 (H) x 84.6 (D) mm
Optional Accessories	Connecting cable for RS link 0.5 m: 02ADD950 *1, Connecting cable for RS link 1 m: 936937 *1, Connecting cable for RS link 2 m: 965014 *1, Terminal connecting cable: 02ADD930 *2, AC adapter: 37651 , AC cable: 02ZAA000 *2

*1: Required when connecting with EV-16P/D/Z.

*2: Required when using AC adapter.

DIMENSIONS

Unit: mm

Counter Specifications

EV Counter – 6-channel, No-display type

EV-16P (542-063)	EV-16Z (542-067)	EV-16D (542-064)
For differential square-wave output gage heads (6 axes)	For differential square-wave output gage heads with Origin Point Mark (6 axes)	For Digimatic code output gage heads (6 axes)

Features

- Able to connect up to 10 EV counters to one personal computer using the RS link function to facilitate the configuration of a multi-point measurement system comprising a maximum of 60 gages.*1
- A range of output modes to choose from; I/O output for tolerance judgment and segment output, BCD data output and RS-232 output are available
- Allows peak measurement, differential measurement, etc., in addition to normal measurement.*2

*1: Patent registered (Japan, U.S.), Patent pending (E.U.)

*2: The differential measurement function is available only for linear gages with the same resolution.

Functions

- External control (Zero-set, Preset etc.)
 - Direction switch
 - Error display
 - Tolerance judgment output
 - Choice of data output (RS-232C, BCD, Segment)
 - Maximum value, minimum value and runout.
- Differential measurement between two gages: addition, averaging, maximum value, minimum value, and maximum width.

System configuration

The system connects Mitutoyo's linear gages while displaying and outputting measurement data with counters.

Internal block diagram

Gage selector

It is possible to assign gage signals one-to-one or one-to-many to the internal counters through parameter settings. This allows the user to set more than one origin point and/or tolerance limit on one gage head.

Internal counters

Using the 6 internal counters (CEL1-CEL6) it is possible to perform origin setting, peak measurement, and tolerance limit setting.

Calculation function

Each of the internal counters is assigned a unique calculation function so that various kinds of calculation can be made between the internal counters specified with the parameters.

Output function

The output format can be selected from among RS-232C, BCD, tolerance judgment result and segment output. The objective CEL of the output can be selected with an appropriate RS-232C command or SET signal.

SPECIFICATIONS

Order No.	542-063	542-067	542-064
Model No.	EV-16P	EV-16Z	EV-16D
Number of input channels	6		
Maximum input frequency	1.25 MHz (2-phase square wave), response speed depends on gage specification. Max. counting speed: 5 MHz	1.25 MHz (2-phase square wave), response speed depends on gage specification. Max. counting speed: 5 MHz	1.25 MHz (2-phase square wave), response speed depends on gage specification. Max. counting speed: 5 MHz
Quantizing error	±1 count

RS-232C Communication Functions

Makes it possible not only to log measured values but also make various remote settings including the zero-setting of a counter, etc.

To communicate data with a PC, terminal software is needed that should be provided by the customer.

Command format	Corresponding output	Function
GA**CRLF	G#**, +01234.567CRLF	Outputs the [Displayed value] through RS-232C
CN**CRLF	CH**CRLF	Switches the display to the [Current value]
CX**CRLF	CH**CRLF	Switches the display to the [Maximum value]
CM**CRLF	CH**CRLF	Switches the display to the [Minimum value]
CW**CRLF	CH**CRLF	Switches the display to the [TIR (runout)]
CR**CRLF	CH**CRLF	Zerose
CL**CRLF	CH**CRLF	Clears the peak value
CP**, +01234567CRLF	CH**CRLF	Inputs the preset value and performs presetting
CD**, +01234567CRLF	CH**CRLF	Inputs lower tolerance value
CG**, +01234567CRLF	CH**CRLF	Inputs upper tolerance value
CS**CRLF	CH**CRLF	Cancels the error
CK**CRLF	CH**, \$CRLF (\$=0 or 1)	Confirms the HOLD state
CT**CRLF	CH**, +01234.567CRLF	Outputs the [Displayed value] through RS-232C

** : denotes a gage channel number between 01 and 99 ("00" means all channels).

: denotes the type of data [N: Current value, X: Maximum value, M: Minimum value, W: TIR (runout)].

CRLF: CR (carriage return), LF (line feed).

Note 1: For presetting and tolerance limit setting, enter each value consisting of a sign and 8 digits of numeric value without a decimal point.

Note 2: Perform the tolerance limit setting in the order of CD and CG

Note 3: Data request for calculation values cannot be specified to all channels of an EV counter.

Note 4: The RS communication function will be suspended during key operation (e.g. setting parameters, preset values, or tolerance limits). It automatically resumes the command and data output operation when the gage is recovered to such a condition that counting is possible.

Note 5: For canceling the counting-standby state, use CS00CRLF (specification of all channels).

■ RS-232C specifications

- 1) Compatible plug:
D-sub 9-pin (female),
inch thread specification

2) Pin assignment

Receptacle
D-sub 9-pin
(male), inch thread
specification

Pin No.	Description	I/O	Contents (application)
2	RXD	IN	Receive data
3	TXD	OUT	Send data
4	DTR	OUT	Data terminal ready
5	GND	—	Ground
6	DSR	IN	Data set ready
7	RTS	OUT	Request to send
8	CTS	IN	Clear to send
1, 9	N.C.	—	Connection impossible

3) Communication specifications (conforming to EIA RS-232C)

Home position	DTE (Data Terminal Equipment) Use a cross-type cable
Communication method	Half-duplex, teletype protocol
Data transfer rate	4800, 9600, 19200 bps
Bit configuration	Start bit: 1 Data bits: (7, 8) ASCII, upper-case characters Number of parity bits: None, even, odd Number of stop bits: 2
Setting the communication conditions	Set via parameters

Input/output specifications

■ I/O connector pin assignment

- 1) Compatible plug: **02ADB440** (with cover) Optional accessory

2) Pin assignment

Socket:
10236-52A2 (3M)
equivalent

Compatible plug

3) I/O circuit

1. Output circuit: Tolerance judgment result output, NOM, segment output, etc. Transistor is "ON" to drive the line to "L" (open-collector output).
2. Input circuit: P.SET, HOLD, SET, etc. Input is valid when the line is "L".

Supply voltage: 24 V max
Output current: 10 mA max
Output saturation voltage: 0.7 V max

Input current: Max. 1 mA

Output saturation voltage:
Max. 0.7 V or less

4) Timing chart

1. Power ON characteristics

Where the RS link is established, the reference counter shall be the one that was powered last.

2. Tolerance judgment result output period

All CELs will not output simultaneously.

Note: The output period in the case of ED-V counter depends on the gage unit being connected.

3. Data output

There are two data output methods; Command mode and Interval mode. Either of them can be set via the I/O output mode parameters.

1) Command mode (All-CEL output)

All-CEL data output (specified with SET1 through SET3) while the HOLD and READY lines are synchronously controlled.

Note: During HOLD input the UNIT LED (D-EV) will be flashing.

2) Command mode (Individual CEL output)

Individual CEL data output (specified with SET1 through SET3) can be performed while the HOLD and READY lines are synchronously controlled.

Note: When it is required to operate in the high-speed mode or All-CEL output mode, always use equipment whose input response time is 1 ms or less.

3) Interval mode (All-CEL output)

All-CEL data (specified with SET1 through SET3) will be sequentially output according to the counter's internal timing.

Note: When it is required to operate in the high-speed mode or All-CEL output mode, always use equipment whose input response time is 1 ms or less.

4) Interval mode (Individual CEL output)

Individual CEL data (specified with SET1 through SET3) will be sequentially output according to the counter's internal timing.

Note: The data update time in the case of 542-064 depends on the type of gage being connected. In addition, the same data may be output over multiple cycles.

4. External presetting

Takes the current value of CEL (which has been specified with SET1 through SET3) as the preset value.

If presetting is executed, the peak value up until then will be cleared. (Max=Min=Current value, TIR=0)

5. Specification of objective CEL of output/ Specification of calculation method

Assigns the CEL that has been specified with SET1 through SET3 to the data output CEL.

Input with SET3 through SET1 during segment output. This usually operates as the range specification data. (This acts as CEL specification when OUTCEL is input.)

- NORMAL, High-speed mode: Specification of the output CEL
- Differential calculation mode: Specification of the calculation method

6. Peak clear

Clears the peak value. (Max.=Min.=Current value, TIR: 0)

Note: Peak clear takes effect only in the peak mode. (In the case of a current value, this has the same effect as a presetting operation.)

Origin Point Mark Detection (EG-101Z, EB-11Z, EH-102Z, EV-16Z)

Note: The example linear gage used in the above explanation is LGF-0510 (110) ZL. This linear gage has its origin point marked at a position approximately 3 mm from the limit of the spindle extension. In the case of 25/50 mm-stroke types the origin point mark is positioned approximately 5 mm from the spindle extension limit.

Origin Point Mark Detection Procedure

1. Turn the display unit connected to the gage head to ON. (The offset register is set to zero at this stage.)
2. Displace the gage head spindle approximately more than 3 mm from the spindle extension limit position to make it pass over the origin point mark.
3. The display unit will automatically read the origin point and zero-set itself.
4. Bring the gage head contact point into contact with the master gage as shown.
5. The display unit indicates the displacement from the origin point position. (Offset register still contains zero.)
6. Input the preset value (the calibrated size of the master gage, 12.000).
7. Remove the master gage so that the spindle extends to its limit.
8. The display unit displays position of the contact point relative to the datum surface.
9. Turn OFF the display unit.
10. Turn ON the display unit.
11. Displace the gage head spindle approximately more than 3mm from the spindle extension limit position to make it pass over the origin point mark.
12. The display unit will automatically read the origin point and the displayed value will effectively start from the stored offset register value (0.000 + 8.000=8.000).
13. The contact tip can now be brought into contact with the workpiece to make the measurement and the display will indicate the workpiece size (4.025 + 8.000=12.025).

Common Specifications of Counters Optional Accessories

Input/output connector

02ADB440 (with cover)

This plug fits the I/O output socket on EG/EB/EH/EV counters.

RS Link Connecting cable for Digimatic Mini-processor

Order No.	Cable length
02ADD950	0.5 m
936937	1 m
965014	2 m

Used to interconnect EH/EV counters comprising an RS link.

Used to output the measurement data from EG/EB/EH counters to Digimatic mini-processor DP-1VA.

* Data output from an EH counter is selectable from between RS-232C and Digimatic. This setting is made with an internal parameter.

Terminal connecting cable

02ADD930

AC adapter

357651

AC cable

(Japan): 02ZAA000 *
 (USA): 02ZAA010 *
 (EU): 02ZAA020 *
 (UK): 02ZAA030 *
 (China): 02ZAA040 *
 (Korea): 02ZAA050 *

* To denote your AC power cable add the following suffixes to the order No.: A for UL/CSA, D for CEE, DC for CCC, E for BS, K for KC, C and No suffix are required for PSE. For those models of the Order No. with Suffix "1", an AC adapter is not supplied as a standard accessory.

Connect the AC adapter to the power terminal on the EG/EB/EH/EV counter. Connect the terminal block connecting cable when supplying power to an EG/EB/EV counter. Use the AC cord to connect the AC adapter to a power outlet.

Connector compatibility

● The connectors listed below are compatible with the specific models of counter shown for measurement, data output, and external control purposes.

Counter	Counter Order No.	Description	Connector Order No.
EC-101D	542-007	GO/NG judgment output	C162-155
EG-101P	542-015	BCD output, GO/NG judgment output	02ADB440

SENSORPAK

Measurement data loading software for EH, EV, VL

MeasurLink **ENABLED**

Data Management Software by Mitutoyo

- This software facilitates loading measurement data onto a personal computer from a linear gage counter with RS-232C output (EH, EV), with USB output (EH), or from a Litematic display (VL).
- 60 channels (max.) of measurement data can be processed.
- Arithmetical calculations and maximum width calculations can be performed using the measurement data.
- Exporting measurement data into MS-Excel format is supported.
- Real time graphical display by means of bar-graph or meter is provided.

Measurement screen 1

Meter screen 2

Chart screen 3

SPECIFICATIONS

Order No.		02NGB073
Product configuration		Program disk (CD), license key, operation manual
Compatible devices		Mitutoyo RS_LINK compatible devices ● LGH Series (USB, RS-232C) ● EH counter (USB, RS-232C) ● EV counter (RS-232C) ● Litematic VL (RS-232C)
Connecting cable		A cable should be prepared to the following specifications: Accessory • RS-232C connection: I/O cable (21HZA137)*1 Commercial product • USB connection: USB cable (type A - type B) • RS-232C connection: RS-232C cross cable*1
Number of connectable gages		Max. 60 units (when 10 units of EV counter for linear gage are connected via RS-Link)
Functions	Display*2	Display format: counting, bar graph, indicator, chart, and table Display cycle: 1 s (when 60 gage units are connected, 1-window display, and no Excel output)
	Calculation	Calculation (up to 30 items) between designated gages is available. Calculation items: Sum, difference, total, average, maximum, minimum, range (maximum-minimum), calculation with a constant
	Tolerance judgment	Per item: Displays the result in colors (3-step tolerance: red/green/red; 5-step tolerance: red/yellow/green/yellow/red) Total judgment: Displays in colors (red/green) by monitoring the multiple gages and calculation result
	Recording*2	Items: channel values, calculation result, tolerance judgment, total tolerance judgment, timestamp Max. number of records: 60000 for software recording (with 6 gages connected); up to 9000 (with 60 gages connected) Output function: Direct output to Excel, CSV file output (compatible with MeasurLink)
	Input/output*3	Recording trigger: key, timer, external TRG Input: TRG for recoderding (HOLD) Output: Total tolerance judgment result
System environment		DOS/V compatible PC environment CPU: Pentium4 2 GHz or more, Memory: 2 GB or more, Hard disk: 2 GB or more free space OS: Windows 7 (32 bit/64 bit), Windows 8.1 (32 bit/64 bit), Windows 10 (64 bit)

*1: If the PC is not equipped with an RS-232C port, please contact the nearest Mitutoyo sales office/service center.

*2: Display cycle and the maximum number of records differ depending on the environment (specification of PC, number of connected gages, display format and communication setting).

*3: With use of the I/O cable (accessory). When an I/O cable is not used, the I/O connector of connector of the counter alternatively functions.
(Refer to the user's manual of the counter in use.)

Examples of Connections between Various Counters and Digimatic Instruments

Input tool

By just connecting the input tool to the keyboard connector on a PC, measurement data from a counting device can be imported as-is to spreadsheet software such as Excel.

Mounting example

ABS Digimatic indicator
ID-CX

Measuring instrument with Digimatic
output to counters such as EC, ED

Input tool

Linear Gage Accessories (Option)

Optional gage head accessories

■ Various Contact Points/Extension Rods (Interchangeable dial indicator contact points are also available.)

- All threads of interchangeable contact points are M2.5 (P=0.45) × 5mm.
- If any contact point is replaced with another, firmly attach it so that it cannot become loosened during use.
(Recommended tightening torque=50 N·cm)
- A carbide contact point is particularly good at resisting to abrasion.

■ ø3 mm Ball Points

Standard contact point.

Without groove

Unit: mm

L (mm)	Material	Carbide	Carbide	Plastic

* Diameter d is available up to ø40 as a custom order.

■ Needle Points

Suitable for probing the bottom of a groove or hole.

Unit: mm
Material: Hardened steel

* Contact Mitutoyo to inquire about specifications such as tip SR: 0.2 or more and l: up to 40.

Order No.	l	L
101121	11	15
137413	13	17
21AAA255	21	25
21AAA256	31	35

■ Needle Points (Carbide)

Unit: mm
Material: Carbide

D	l	3	5	8	10	13
0.45	Order No.	120066	21AAA329	—	—	—
0.1	Order No.	120065	21AAA330	21AAA331	21AAA332	—
0.15	Order No.	—	21AAA335	—	21AAA336	120064
0.2	Order No.	—	—	137257	—	—

D	l	18	20	28	40
0.1	Order No.	—	21AAA333	—	21AAA334
0.15	Order No.	—	21AAA337	—	21AAA338
0.2	Order No.	21AAA257	—	21AAA258	21AAA339

* A different specification is available as a custom order.

■ Blade Points (Carbide)

Convenient for cylinder measurement, etc.

Unit: mm
Material: Carbide

D	H	0.4	0.6	1
0.2	Order No.	120061	120062	—
0.4	Order No.	—	—	120063

Note: If perpendicularity to the stem, parallelism with the reference plane, and different contact point orientation are required using a blade contact point, extra adjustment in conjunction with the linear gage is necessary. Consult with Mitutoyo as a custom-made option.

■ Conical Points

Used for positioning the measurement point. Since it can damage a workpiece easily, it is not suitable for use on soft materials.

Unit: mm
Material: Hardened steel

■ 90° Conical Points (Carbide)

Unit: mm
Material: Carbide

120057

Note: Angles other than 90° are available as a custom order.

■ Knife Edge Point (Carbide)

Suitable for measuring narrow groove diameter, etc.

Unit: mm
Material: Carbide

120067

* Diameter D more than 0.5 and length/ between 5 and 40 are available as a custom order.

■ Extension Rods

Unit: mm
Material: Stainless steel

L	Order No.	L	Order No.
10	303611	55	21AAA259G

■ Roller Points

901954

Unit: mm
Roller part material: Hardened steel
Roller run-out: 10 μm

Note 1: A different 0.5 mm is available as a custom order.
Note 2: A high-accuracy type with a roller run-out of 5 μm is available. (Custom-made option)

QUICK GUIDE TO INSTRUMENTATION TERMINOLOGY

Linear gage systems

Gage head

■ Nut and split-clamp stem mounting

Gage heads are mounted on a fixture or stand using the precision-machined cylindrical stem. Stems can be any one of several standard diameters and are either just plain or with a fixing thread at one end or the other. All gages can be mounted using the split-clamp method which is suitable for a range of applications, especially where small axial adjustments may be required. However, care is needed to avoid over-tightening the clamp, which could interfere with the spindle movement. Those stems with a thread at the spindle end can also be mounted just by using a nut to clamp them into a hole in a fixture. They can also use a "thrust stem" (see page 25) that is clamped into a larger hole in a fixture and into which the gage is screwed. Stems with a thread at the body end can also use this method of mounting.

Nut mounting

Split-clamp mounting

■ Measuring force

A force is produced when a workpiece is brought into contact with the tip of a linear gage head and forces the spindle to retract against the action of the return spring. This is known as the measuring force and is specified in newtons (symbol N). As this force is spring-generated it increases with spindle retraction.

■ Comparison measurement

When a measurement is required that is beyond the measuring range of a particular gage head, so that an 'absolute' measurement is impossible, a calibrated master gage (e.g. gage blocks) or master workpiece can be used to subtract the greater part of the distance involved so that the head only has to measure the difference between the workpiece and the master. This 'comparing' of the size of a workpiece with that of a master gives rise to the term 'comparison measurement'. (See page 59 for a detailed description.)

■ IP Codes

IP54

Type of protection	Level	Degree of protection
Protection of the human body and protection against foreign objects	5: Protected against dust	Ingress of dust is not totally prevented, but dust that does penetrate must not interfere with satisfactory operation of the apparatus or impair safety
Protection against water	4: Protected against splashing water	Water splashed against the enclosure from any direction shall have no harmful effects

IP66

Type	Level	Protection guarantee
Protection of the human body and protection against foreign objects	6: Dust-proof	No ingress of dust allowed
Protection against water	6: Protected against powerful water jets	Water projected in powerful jets against the enclosure from any direction shall have no harmful effects

Display unit

■ Zero-set

Sets the displayed value to 0 at any position of the spindle.

■ Preset

Presets the display at any value. Counting begins at the preset value.

■ Direction switch

Selects the counting direction of (+) or (-), whichever is convenient with a given direction of spindle movement.

■ Peak hold/TIR measurement

Allows switching to the measurement mode for maximum value, minimum value, and run out value (maximum - minimum), in addition to the normal measurement mode.

■ Tolerance judgment indication/output

Sets two (or four) desired tolerances for three (or five) stages. Judgment results can be output to an external device.

■ Open collector output

This method allows direct derivation of GO/NG judgment output from the collector circuit of a power transistor to drive a load.

■ Digimatic output

Data can be output to various printers and statistical processing devices, such as DP-1VA and MUX-10LF, using the Digimatic code (SPC) output format.

■ BCD output

The displayed value can be output in Binary Coded Decimal format.

■ Communication via RS-232C interface

RS-232C allows communication with a personal computer. It allows not only the reading of measured values but also data transmission to the counter and remote operations, such as when changing various settings.

Before using the gage head

■ Avoid installing the gage in locations where:

- The gage will be exposed to direct sunlight, or where the ambient temperature may drop below 0°C or exceed 40 °C.
- The relative humidity may drop below 20 %RH or exceed 80 %RH, or where a sudden change in temperature may cause condensation.
- The gage would be subject to corrosive gas, or where combustible materials are placed nearby.
- The gage is subject to air containing significant amounts of dust, salt or iron powder.
- The gage is subject to direct vibration or shock.
- The gage may come in contact with splashed water, oil or chemicals. (The gage system components are not designed for protection against water, oil or chemical attack, except for the gage unit.)
- Electronic noise is likely to affect the gage.

■ Conformance to EU Directive

- EMC Directive: EN61326-1

■ Preventing electrical interference

- Bundling the sensor cable with high-voltage lines or power lines may cause the gage to malfunction. The sensor cable run should be completely separate.

■ Power supply to the display unit

- If a generic switching regulator is used, provide grounding via the frame's ground terminal or ground terminal of the power supply.
- If a malfunction occurs due to superimposed noise on the power-supply line, use a DC-regulated power supply that incorporates an isolation transformer.

■ About grounding

- Avoid sharing the frame ground (F.G.) terminal of this unit with the high-power line grounding but separately connect it to Class 3 Grounding.

Handling precautions

- This product is a precision measuring instrument. Avoid dropping or otherwise subjecting it to impact.
 - The spindle of the gage head is connected to the body via a spring. Be careful not to pull the spindle in the extending direction or rotate it with force. Doing so may cause permanent distortion and damage to the spring.
 - The gage is shipped with a standard contact point (901312) installed on the spindle. This contact point can be replaced with a different type that best suits the shape of the workpiece feature to be measured. (See page 54, 55.)
- When installing or removing a contact point, locate the key wrench provided in the wrench groove in order to keep the spindle from rotating. Then grip the contact point with pliers to install or remove it. When gripping the contact point with pliers, insert a piece of felt or other soft packing between the jaws and the point to protect it from damage.

Precautions when mounting the gage head

The following illustrate important points to which customers should pay attention. Refer to these when using gage heads and counters.

■ All series of linear gages

The contact point is interchangeable according to the application. When installing or removing a contact point, locate the key wrench provided in the wrench groove in order to keep the spindle from rotating. Then grip the contact point with pliers to install or remove it. When gripping the contact point with pliers, insert a piece of felt or other soft packing between the jaws and the point to protect it from damage.

■ LGB2 models

To mount the gage in the mounting hole, fasten the clamp nut with the standard-supplied wrench while holding the knurled part in the middle of the main unit by hand. Take care not to hold the cable receptacle on the main unit, otherwise the gage may be damaged due to strain caused by twisting.

■ LGK, LGF and LGD models

If the thrust stem is retrofitted, the gage can be fixed more steadily and easily only by drilling a $\varnothing 9.5$ hole on a plate with a thickness of about 10 mm. To mount the thrust stem, fit the special wrench (option) in the wrench groove in the middle of the main unit, and then fasten the clamp nut with the standard-supplied wrench while holding the knurled part by hand. Take care not to hold the cable receptacle on the main unit, otherwise the gage may be damaged due to torque caused by twisting.

■ EC, EG, EB and EV counters

Provided with power supply terminal. Input power of 12 to 24 V DC (1 A or more).

Only the optional I/O output connector **02ADB440** is available from Mitutoyo. This is because the number of pins and length of cable varies with application requirements and accordingly wiring is better left for customer's arrangement.

This counter is dedicated to panel-mount application and is not suited for direct bench-mount application. Choose an EH counter for bench-mount or carry-on application.

Precautions when mounting the gage head

Applies to all linear gages

■ Mounting the gage head

- Mount the gage on a fixture or stand by using its stem only.
- Be careful not to over-tighten the stem. Doing so may cause problems in gage operation.
- Never fasten the gage by the method of clamping with a screw directly in contact with the stem.
- Mount the gage in such a way that its stem is in line with the direction of measurement required. If installed at an angle to this direction, measurement errors will occur.
- Be careful not to exert force on the gage via the cables. Exercise due care especially when using an extension cable.

■ Examples of the plain-stem mount

- The recommended clamping torque is 0.4 to 0.5 Nm. Over-tightening the stem clamp will prevent smooth movement of the spindle. Ensure the spindle can move freely after clamping.

Example 1

Unit: mm

Example 2

Unit: mm

■ Replacing the contact point

- Fit the supplied key wrench in the wrench groove so as not to rotate the spindle, and then attach or detach the contact point while gripping it with pliers. Before gripping the contact point with pliers, apply a soft cloth such as felt to protect the contact point from damage.
- If a torque is applied to the spindle, the gage may be damaged. Replace the contact point with due caution after securing the spindle firmly with the key wrench.

■ About dust/water protection

The protection level of all slim type linear gages is equivalent to IP54 (DIN 40050-1/IEC529 Standards).

- The preamplifiers and counters are not designed to be dust-or water-proof. Install them in places where they will not come into direct contact with dust, water or oil.
- When an extension cable is used, seal the preamplifier connection and connectors completely, making sure no portion is left exposed.
- If the cable cover is damaged, water or other liquids may enter the gage due to capillary effect, causing gage failure. If the cable cover becomes damaged it should be repaired or replaced immediately.
- Handle the gage with due caution to make sure that the rubber boot will not be damaged by scuffing, etc. If the rubber boot is damaged, the gage can no longer be protected from dust or water ingress. When damage is found, repair or replace the boots immediately.
- The rubber material used for the boots and seals does not provide complete protection against coolants and chemicals, which are becoming increasingly complex in composition. If rubber parts are found to have deteriorated significantly, contact your nearest Mitutoyo office.
- The gage must not be disassembled, since it will break the seals of various components. Never attempt to disassemble the gage. Doing so will prevent the gage from functioning to its original specifications.

Precautions when mounting the gage head

Air drive model

- Service air pressure: 0.3 to 0.4 MPa
- Lubricating oil: Turbine oil class 1 (ISO VG32)
- Caution: Holding the air cylinder section while mounting gage will exert force on section A, causing a gage failure. For the same reason it is essential not to apply force to section A when connecting an air hose to the gage head.

Example of air piping

LGB2 Type

■ Mounting the gage

Insert the linear gage in the gage mounting hole (recommended: $\varnothing 9.5$, H6) and clamp the gage with the supplied clamp nut. Use the supplied wrench at that time.

- Avoid over-tightening the stem part as this may raise a problem during mounting.

Note 1 Use any available mounting fixtures shown on page 24. If clients manufacture their own fixtures, Mitutoyo recommends 11.5 mm for dimension B.

Note 2 Linear gage heads have been used in an extremely wide range of fields. When gage heads are actually mounted on a machine, however, fixtures are often manufactured at high cost. To eliminate such waste, Mitutoyo's linear gage head mounting fixtures have been manufactured in due consideration of every possible mounting method from design and working respects. Cast iron (FC45, nickel plating) is used for these fixtures.

LGD/LGF/LGK Type

■ Example of using optional accessories

If the thrust stem and clamp nut are used, the gage can be fixed more steadily and easily only by drilling a $\varnothing 9.5$ hole on a suitable gage mounting fixture.

Note 1 Refer to page 25.

Laser Hologage

■ Mounting the gage

A Laser Hologage can be mounted by inserting its stem in the mounting hole of a dedicated stand or other equipment.

Recommended mounting hole diameter in fixture: **15 mm** $+0.024$
 $+0.006$

- The mounting hole shall be machined parallel with the direction of measurement. Cosine-effect measurement error will occur if the gage is misaligned with this direction.
- Excessive force in tightening the stem will affect smooth spindle motion and should be avoided.
- In applications where a Laser Hologage is subject to movement, ensure that the mounting is designed to avoid the cable being dragged when in motion.

■ Precautions for measurement:

- To help ensure accuracy, allow 30 minutes warm-up time for the system after powering ON.
- Allow sufficient time for temperature stabilization for both the gage and workpieces to be measured.
- Thoroughly clean the contact point and all surfaces to be measured before measurement to avoid accuracy degradation due to dust or grease.
- Be aware of possible overspeed errors if the contact point is allowed to drop significantly from surface to surface on the workpiece. Appropriate measuring procedures should always be used with due consideration for the part features.

Whatever your challenges are, Mitutoyo supports you from start to finish.

Mitutoyo is not only a manufacturer of top quality measuring products but one that also offers qualified support for the lifetime of the equipment, backed up by comprehensive services that ensure your staff can make the very best use of the investment.

Apart from the basics of calibration and repair, Mitutoyo offers product and metrology training, as well as IT support for the sophisticated software used in modern measuring technology. We can also design, build, test and deliver bespoke measuring solutions and even, if deemed cost-effective, take your critical measurement challenges in-house on a sub-contract basis.
